SAMPLE Example business, example answers. Example Wholesale is fictional: its team, tools, answers and export are made up to show what the report looks like. Every hour figure is worked out from those answers by the sum printed beside it, and every price is the fixed price published on aigrow.gg on 5 November 2026.

27.5 hours a week across 5 automations: the work Example Wholesale could hand to AI agents first

Example Wholesale sells cleaning and catering supplies to restaurants, cafés and offices, with 14 people in sales, the office, purchasing, the warehouse and delivery. Its answers listed 8 tasks that come back every week, and it sent an export of the last 4 weeks of orders.

Summary

The total

The 5 automations add up to 27.5 hours a week. That is above the 5 hours a week the refund rests on, so the scan price stands.

Start with

Email orders into Odoo. It takes the most hours off the week, 12.0 of the 27.5, and it is a fixed price build of 10 working days.

Price to build

All 5 are jobs on our fixed price list, $6,050 if you order all 5, each paid once. Each runs in your own automation account, whose plan is billed to you by its provider. Managed care is optional, from $79 a month.

The 5 at a glance

Ranked by hours a week. The sum behind each figure is in the automation's own section, and the last page lists every number it uses.

#	AUTOMATION	HOURS A WEEK	TOOLS	BUILD PRICE
1	Email orders into Odoo	**12.0**	Outlook, Odoo	$1,490
2	Customer email triage with draft replies	**5.0**	Outlook	$1,190
3	Quote drafts from restaurant requests	**4.5**	Outlook, Odoo	$1,190
4	Supplier invoices into Xero	**4.0**	Outlook, Xero	$990
5	Supplier price lists into Odoo	**2.0**	Outlook, Odoo	$1,190
	Total	**27.5**		**$6,050**

Hours a week = times a week × minutes each × the share an agent takes over ÷ 60, rounded to one decimal. The share is the minutes saved on each item divided by the minutes it takes now; the minutes a person still spends include checking the agent's work.

The 5 automations

What each one does, the tools it touches, the sum behind its hours and our price to build it.

1

12.0

hours a week

Email orders into Odoo

When an order reaches orders@ as an email or a PDF, the agent reads it, checks each product code and quantity against your Odoo product list and enters a draft sales order. A person confirms each draft; an order that does not match waits for them with the reason.

Tools	Reads Outlook (orders@) and the Odoo product list; writes draft sales orders in Odoo.
The sum	**120 a week × 8 min × 75% ÷ 60 = 12.0 hours a week** Share: (8 min now minus 2 min left) ÷ 8 = 75%
Source	Times a week: counted, 480 orders in the export ÷ 4 weeks = 120 (your answer said about 100). Minutes each: your answer.
A person still	About 2 min an order to check the draft and confirm it.
We need	From you: 20 sample orders, your product list with codes, and a user on the system that receives the orders.
Our price	$1,490, paid once: “Order intake to ERP or sheet”, a fixed price job on our workflow automations page, live within 10 working days of the build plan you approve, with 30 days of fixes.
Limits	Handwritten or photographed orders may not read clearly and go to a person. Nothing changes inside Odoo itself, such as new fields.

2

5.0

hours a week

Customer email triage with draft replies

Each email to info@ is labelled by topic and urgency (delivery date, missing item, product question, complaint) and sent to the right person with a draft reply from your saved replies and delivery rules. That person checks the draft, adds what is specific and sends it.

Tools	Reads and labels the shared Outlook inbox (info@) and leaves the drafts there.
The sum	**150 a week × 4 min × 50% ÷ 60 = 5.0 hours a week** Share: (4 min now minus 2 min left) ÷ 4 = 50%
Source	Times a week and minutes each: your answers.
A person still	About 2 min a message to check, complete and send the draft.
We need	From you: 50 past messages with the replies you sent, your topics and who handles each, and your help articles or saved replies.
Our price	$1,190, paid once: “Support inbox triage”, a fixed price job on our workflow automations page, live within 10 working days of the build plan you approve, with 30 days of fixes.
Limits	No reply goes out without a person. Complaints and anything about money are labelled and routed, never drafted.

3

4.5

hours a week

Quote drafts from restaurant requests

A quote request by email becomes a draft quotation in Odoo with your products, prices and terms. The sales manager checks it, adjusts it and sends it.

Tools	Reads Outlook (sales@) and the Odoo price list; writes draft quotations in Odoo.
The sum	**30 a week × 15 min × 60% ÷ 60 = 4.5 hours a week** Share: (15 min now minus 6 min left) ÷ 15 = 60%
Source	Times a week and minutes each: your answers.
A person still	About 6 min a quote to check the lines, adjust prices for regular customers and send it.
We need	From you: your price list and quoting rules, 10 past requests with the quotes you sent, and your quote template.
Our price	$1,190, paid once: “Quote drafting from a request”, a fixed price job on our workflow automations page, live within 10 working days of the build plan you approve, with 30 days of fixes.
Limits	No quote is sent without a person. Requests for products you do not list yet stay manual.

4.0

hours a week

Supplier invoices into Xero

Invoices that land in invoices@ are read: the supplier, number, dates, amounts, tax lines and line items go into Xero as draft bills. An invoice the agent cannot read clearly goes to the office manager.

Tools	Reads Outlook (invoices@); writes draft bills in Xero.
The sum	**60 a week × 5 min × 80% ÷ 60 = 4.0 hours a week** Share: (5 min now minus 1 min left) ÷ 5 = 80%
Source	Times a week and minutes each: your answers.
A person still	About 1 min an invoice to check the draft bill and approve it.
We need	From you: 20 sample invoices from different suppliers, and a user on your accounting software.
Our price	$990, paid once: “Invoice data extraction”, a fixed price job on our workflow automations page, live within 7 working days of the build plan you approve, with 30 days of fixes.
Limits	It does not approve or pay invoices. A new supplier’s first invoices are worth checking line by line.

5

2.0

hours a week

Supplier price lists into Odoo

When one of your 3 main suppliers sends a price list in Excel or PDF, the agent matches each line to your products, lists every changed price with the selling price your rule gives, and writes the prices you approve to Odoo.

Tools	Reads the price lists sent to Outlook (purchasing@) and the Odoo product list; writes approved prices to Odoo.
The sum	**4 a week × 40 min × 75% ÷ 60 = 2.0 hours a week** Share: (40 min now minus 10 min left) ÷ 40 = 75%
Source	Times a week and minutes each: your answers.
A person still	About 10 min a list to read the changes and approve them.
We need	From you: recent price lists from up to 3 suppliers, your product list with codes, and the rule that sets your prices from theirs.
Our price	$1,190, paid once: “Supplier price list updates”, a fixed price job on our workflow automations page, live within 10 working days of the build plan you approve, with 30 days of fixes.
Limits	It covers the 3 suppliers in the plan; a new supplier’s format is a change to the build.

Left out

Tasks from the answers that we looked at and did not rank.

TASK	HOURS A WEEK	WHY
Weekly sales report	0.8	Ranks sixth, below the 5 kept. It is a fixed price job too, “Weekly KPI report” at $790, if you want it later.
Credit checks for new trade customers	Not counted	Your rule: a person decides every credit limit. An agent could collect the documents, but the decision stays with you.
Stock counts	Not counted	Counted on paper in the warehouse, so there is no tool an agent could read from or write to.

Every number and its source

The answers Example Wholesale gave, task by task. Minutes left is our estimate of what a person still spends on each item, checking included; where we were unsure, we took the lower share.

TASK	WHO	TIMES A WEEK	MINUTES EACH	MINUTES LEFT	SHARE	HOURS A WEEK
Typing email orders into Odoo	Sales assistant	120	8	2	75%	12.0
Answering customer emails	Customer service	150	4	2	50%	5.0
Writing quotes	Sales manager	30	15	6	60%	4.5
Entering supplier invoices in Xero	Office manager	60	5	1	80%	4.0
Updating supplier prices in Odoo	Purchasing	4	40	10	75%	2.0
Weekly sales report	Owner	1	60	12	80%	0.8
Credit checks for new trade customers	Owner	3	30			Not counted
Stock counts	Warehouse lead	2	90			Not counted

Times a week for email orders is the export count (480 in 4 weeks), not the answer (about 100): where both exist, the report uses the count.

Next step

The credit

If you order an automation this report quotes by 5 December 2026, 30 days after the report, we refund the scan price, $290, from that payment. If you start AI Operations by then, it comes off your first monthly invoice. The credit applies once.

How to start

Reply to the email that brought you this report and name the automation. Or let agents run the work with AI Operations, from $990 a month, at aigrow.gg/ai-operations.

What the report does not promise

The hours are an estimate from your answers of the time your team gets back on these tasks. The report does not promise lower costs or more sales, and nothing was changed in your tools to write it.
